Congratulations on Your Purchase!

You haven’t just purchased a quilting machine; you’ve joined the Handi Quilter family, and we welcome you. You have acquired the most advanced quilting machine available in today’s market.

Handi Quilter is committed to innovation, reliability, customer service, and education. Our machines are Designed by a Quilter, for Quilters® and we are committed to your quilting success. With that in mind, we invite you to bookmark our website: www.HandiQuilter.me and invite you to visit to learn more about the art of quilting. We’ve posted videos on subjects as diverse as Oiling Your Machine to Loading a Quilt to Making Perfect Feathers.

Your new quilting friends are already there, waiting for you! Remember, if you ever have questions, your local HQ authorized retailer can help you. If the retailer is not available, contact Handi Quilter directly at HQCares@HandiQuilter.com or by calling us, Monday through Friday, 8:00 AM to 5:00 PM Mountain Time (1-877-697-8458 or 1-801-292-7988).

Keep the carton and packing materials. You will need them if you need to return the machine to the retailer or send it for repair. If you don’t pack the machine properly or if you don’t use the correct packaging materials, the machine could be damaged. Handi Quilter is not liable for damage that occurs during return shipping.

**IMPORTANT:** These packaging materials are designed to prevent the machine from being damaged. Keep them in case you need to bring this machine to the dealer or send it for repair.

Consignes de sécurité

Cet appareil est conforme à la partie 15 de la réglementation de la FCC. Son fonctionnement est soumis aux deux conditions suivantes : (1) cet appareil ne doit pas causer d’interférences nuisibles, et (2) cet appareil doit accepter toute interférence reçue, y compris les interférences pouvant provoquer un fonctionnement indésirable.

Veuillez noter : n’utilisez pas votre machine à quilter HQ Moxie avant d’avoir lu entièrement les informations contenues dans ce manuel. Veuillez conserver tous les emballages et les informations de commande à des fins de garantie.

CONSIGNES DE SÉCURITÉ IMPORTANTES

Lisez toutes les consignes avant d’utiliser la machine.

Lorsque vous utilisez cette machine, vous devez toujours prendre des précautions de sécurité de base, notamment ce qui suit :

— Pour réduire le risque de choc électrique :

Une machine à quilter ne doit jamais être laissée sans surveillance lorsqu’elle est branchée. Débranchez toujours la machine de la prise électrique immédiatement après usage et avant de la nettoyer.

— Pour réduire le risque de brûlures, d’incendie, de choc électrique ou de blessures :

• La HQ Moxie est très lourde. Ne jamais tenter de la soulever seul. Utilisez toujours deux personnes pour la soulever. Soulevez toujours la machine à partir de la gorge, non pas à partir des poignées.

• Débranchez toujours la HQ Moxie de la prise électrique lors des travaux d’entretien, du changement d’aiguille, de la suppression des blocages de fil, ou lorsqu’elle est laissée sans surveillance.

• Ne pas débrancher en tirant sur le cordon. Pour débrancher, saisir la fiche, non le cordon.

• N’approchez pas les doigts des parties mobiles. Faites preuve de prudence lorsque vous vous
• Approchez de l'aiguille ou de composants externes tranchants.

• Changez souvent d’aiguille. N’utilisez pas d’aiguilles tordues ou émoussées. « Chaque quilt mérite une nouvelle aiguille ».

• Mettez la machine sur la position 0 ou de symbole d’arrêt pour l’éteindre lorsque vous effectuez des réglages dans la zone de l’aiguille : enfilage de l’aiguille, changement d’aiguille, bobinage de la canette, changement de pied, etc.

• Ne faites jamais tomber et n’insérez jamais d’objets étrangers dans une ouverture.

• La HQ Moxie doit être utilisée uniquement à l’intérieur dans un endroit non humide.

• La HQ Moxie ne doit pas être rangée ou utilisée à des températures extrêmes.

• Utilisez la HQ Moxie uniquement pour son usage prévu indiqué dans ce manuel.

• Pour débrancher la machine de la prise murale, mettez l’interrupteur sur arrêt, puis retirez la fiche de la prise en tirant à partir de la fiche et non du cordon. N’utilisez jamais la HQ Moxie si le cordon est endommagé ou ne fonctionne pas correctement. En cas de problème mécanique ou électrique, renvoyez la HQ Moxie au centre de service agréé le plus proche ou au fabricant pour inspection, réparation, ou réglage électrique ou mécanique.

• Il est déconseillé d’utiliser la machine à quilting HQ Moxie avec un cadre de machine à quilter autre que ceux recommandés par Handi Quilter.

• Utilisez cette machine à quilter uniquement pour l’usage prévu décrit dans ce manuel. Utilisez uniquement les accessoires recommandés par le fabricant décrits dans ce manuel.

• Ne jamais utiliser la machine si des ouvertures d’air sont bloquées. Gardez les ouvertures de ventilation de la machine exemptes d’accumulation de peluches, poussières et morceaux de tissu.

• Ne pas utiliser là où des aérosols (vaporisateurs) sont utilisés ou de l’oxygène est administré.

• Ne pas tirer ni pousser trop fort la machine sur le tissu lors de l’exécution des points. Cela pourrait provoquer une déviation de l’aiguille et en entraîner la fracture.

• N’utilisez que les aiguilles conçues pour le quilting en piqué libre et recommandées par Handi Quilter pour cette machine. D’autres types d’aiguilles risqueraient de se fracturer au cours d’un quilting normal.

• Ne pas laisser les enfants jouer avec la machine. Une attention particulière est nécessaire lorsque cette machine est utilisée par ou à proximité d’enfants.
• Cette machine peut être utilisée par des enfants de 8 ans et plus, ainsi que par des personnes atteintes d’un déficit physique, sensoriel ou mental, peu expérientées ou ayant peu de connaissances, à condition que ces personnes reçoivent les instructions de sécurité et la supervision nécessaires à l’utilisation de la machine et qu’elles comprennent les risques encourus.

• Les travaux de maintenance et de nettoyage ne peuvent pas être effectués par des enfants sans supervision.

Important Safety Information

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. See the full Declaration of Conformity in the Appendix.

» IMPORTANT: Do not operate your Moxie quilting machine until you have completely read the information contained in this manual. Please keep all packaging and order information for warranty purposes.

IMPORTANT SAFETY INSTRUCTIONS

Read all instructions before using this machine.

When using this machine, basic safety precautions should always be followed, including the following:

DANGER — To reduce the risk of electric shock:

- A quilting machine should never be left unattended when plugged in. Always unplug the machine from the electrical outlet immediately after using and before cleaning.

WARNING — To reduce the risk of burns, fire, electric shock, or injury to persons:

- The Moxie is heavy. Never attempt to lift it alone. Always use two people when lifting. Always lift from the throat of the machine.

- Always unplug the Moxie from the electrical outlet when performing any maintenance, changing the needle, removing thread locks, or when left unattended.

- Do not unplug by pulling on cord. To unplug, grasp the plug, not the cord.

- Keep fingers away from all moving parts. Use caution around the needle or sharp external components.

- Change the needle often. Do not use bent or dull needles. “Every quilt deserves a new needle”.

- Switch the machine to the symbol off, or 0, position to turn it off when making any adjustments in the needle area, such as threading needle, changing needle, threading bobbin, changing hopping foot, and so forth.
• Never drop or insert foreign objects into any opening.

• The Moxie should only be used indoors away from moisture.

• The Moxie should not be stored or used in extreme temperatures.

• Use the Moxie only for its intended use as described in this manual.

• To disconnect from the wall outlet, push the switch to the off position, then remove the plug from outlet pulling from the plug, not the cord. Never operate the Moxie if the cord is damaged or not working correctly. If a mechanical or electrical problem is encountered, return the Moxie to the nearest authorized service center or the manufacturer for examination, repair, electrical, or mechanical adjustment.

• It is not recommended that the Moxie quilting machine be used with any table other than those recommended by Handi Quilter.

• Use this quilting machine only for its intended use as described in this manual. Use only attachments recommended by the manufacturer as contained in this manual.

• Never operate the machine with any air openings blocked. Keep ventilation openings of the machine free from the accumulation of lint, dust, and loose cloth.

• Do not operate where aerosol (spray) products are being used or where oxygen is being administered.

• Do not pull or push the fabric under the machine excessively while stitching. It may deflect the needle enough to cause it to break.

• Use only needles designed for free motion quilting and recommended by Handi Quilter for this machine. Other types of needles may be break during normal quilting.

• Children shall not play with the machine. Close attention is necessary when this machine is used by or near children.

• This appliance is not intended for use by persons (including children) with reduced physical, sensory, or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.

• Children should be supervised to ensure that they do not play with the appliance.

• Cleaning and user maintenance shall not be made by children without supervision.
Save These Instructions

This machine is intended for household or commercial use.

Disclaimer

Handi Quilter and its Retailers are in no way legally responsible or liable for damage to the Moxie when used improperly or not in accordance with the guidelines stated in this manual or when used on machine quilting tables not recommended by Handi Quilter.

To use the machine safely

1. Carefully watch the needle when sewing. Do not touch the hand wheel, take up lever, needle, or other moving parts.

2. Turn the machine off and unplug the cord in the following cases:
   • when you have stopped using the machine
   • when you replace or remove the needle or any other part
   • when you check or clean the machine
   • when you leave the machine unattended

3. Connect the machine directly to the wall outlet or to a surge protector that connects directly to the wall outlet. Do not use extension cords.

To increase the life of your machine

1. Do not store this machine in areas exposed to direct sunlight or high humidity. Never use or store the machine near a heater, an iron, a halogen lamp or other hot things.

2. Use only neutral soaps or detergents to clean the machine. Benzene, solvents and scouring powders can damage the case and the machine and therefore should never be used.

3. Do not drop or bump the machine.

4. Always consult the manual to replace or fix the hopping foot, needle or any other part of the machine. If necessary contact an authorized Handi Quilter retailer or Handi Quilter technical support.

Installation and Setup

Spool Pin and Thread Mast

To install the spool pin on the machine

1. You’ll need the spool pin with nut and washer.
2. Remove the nut and washer.
3. Place the washer against the top of the machine cover.
4. Screw the nut onto the spool pin all the way.
5. Place the spool pin through the washer and into the top cover and tighten it all the way.
6. Hold the spool pin firmly and tighten the nut with the 8mm wrench (provided). Do not over tighten.

To install the thread mast onto the machine

1. You’ll need the thread mast with washer and nut.
2. Remove the nut and washer.
3. Place the washer against the top of the machine cover.
4. Screw the nut onto the thread mast all the way.
5. Place the thread mast through the washer and into the top cover and tighten it down to the nut. Turn until the loop of the mast is directly over the spool pin.
6. Hold the thread mast firmly and tighten the nut with a 10mm wrench (provided). Do not over tighten.
Machine Head USB Port (built-in)

The USB port is a full USB port that can be used to power a USB device or communicate with accessories. It is located on the side of the machine to the left of the display at the front. This USB Port is NOT used for machine and display updates. For more information, go to the Updates section on page 40.

Installing the Power Cord

To install the power cord

- Insert the plug into the power connector on the rear of the machine. Plug the three-prong plug end into your power source.

To disconnect the power cord

- First pull out on the red buttons on the sides of the plug and then pull the plug out of the machine.

  **NOTE:** Make sure that the machine is off before plugging into a power source. The main power switch should be in the O (off) position.

Installing the Foot Pedal

- Plug the foot pedal extension cable into the back of the machine

- Plug the other end of the extension cable into the foot pedal and place it on the floor within easy reach of the desired foot.

Connecting the Table Insert

Plug the 90° USB cable into the back of the machine and the white connector into the white connector on the rear of the Optical Sensor Board at the front of the table. (Shown with board cover off)
Installing the Touchscreen Display

The Moxie ST comes with one 4.3-inch touchscreen front display.

To install the front display

1. Locate the three screws for the touchscreen bracket. Line up the black adapter piece and the white touchscreen bracket with the holes on top of the Moxie ST. Insert and tighten the screws with the included hex wrench.

2. Plug the USB mini B cable (with 90° connection), coming out of the top front cover, into the bottom of the display. This cable provides power and signal connection from the machine to the display. The USB connection on the bottom right of the display is used for updating the display and the machine software.

⚠️ IMPORTANT: Note the other connections on the bottom of the display for power and audio are not functional.
Optional Accessories

Horizontal Spool Pin

ONLINE: To see how to install the horizontal spool pin, watch the video at: https://www.youtube.com/watch?v=lb9MEK7bkLo&t=3045s

The optional Horizontal Spool Pin allows you to use threads that need to feed from the side of the spool horizontally. Examples would be straight-wound spools or mylar holographic threads.

The kit comes with 3 parts; a threaded post, a pin and a clamp. The Moxie ST does not require the threaded post, so set that aside.

1. Loosen thumbscrew on clamp and attach to the top of the Moxie ST spool pin through the opening closest to the thumbscrew.

2. Place the pin through the other opening and position it so that it is horizontal, at a 90-degree angle to the Moxie ST spool pin and pointing out to the right of the machine.

3. Tighten the thumbscrew.

4. Place spool of thread on the horizontal spool pin and thread machine normally.

Handi Feet

Handi Quilter offers several optional accessory feet that can be used for everyday quilting as well as special techniques. Explore the possibilities with these videos.

ONLINE: For more information about changing the feet, watch the video at: https://www.youtube.com/watch?v=lb9MEK7bkLo&t=720s

ONLINE: For more information about optional HQ Handi Feet, watch the HQ Live video HQ Live - Mary Beth Krapil at: https://youtube/AEREeMa9wDg.
Operating Instructions

Power Switch

The main power switch is at the rear of the machine.

Turn on the main power switch first by toggling the switch from the O position (off) to the - position (on).

⚠️ **IMPORTANT:** When you are finished quilting, if you will not be using the machine for more than a day, we recommend you turn off the main power switch and unplug the power cord from the power source.

⚠️ **IMPORTANT:** Refer to the safety instructions.

Lighting

The Moxie ST includes bright LED lights above the needle to make it easy for you to see your quilting. You can adjust the intensity of the lights to suit your environment.

Machine Needle

Use only the recommended needle system for your Moxie ST quilting machine. The machine is timed to use this specific type of needle (System 134) which is designed to work with the high quilting speeds and multi-directional stitching the Moxie ST offers.

The Moxie ST uses the 134 needle system. Note that the needle has a round shank rather than a shank with a flat side, like home sewing machines use.

If you use the recommended needle, you will experience:

- Fewer skipped stitches
- Less needle breakage
- Less thread breakage, especially at high speeds
- Less thread splicing or shredding
- Optimum fabric protection

⚠️ **IMPORTANT:** Change the needle regularly. We recommend you use a new needle for each new quilt and any time the needle becomes bent, dull, or burred.

⚠️ **CAUTION:** A damaged needle may result in poor stitching quality or may even damage the machine or your quilt.
To change the needle

**ONLINE:** For more information about replacing the needle, watch the video at: https://www.youtube.com/watch?v=lb9MEK7bkLo&t=610s

1. Move the needle bar to the UP position by pressing the Needle Up/Down control on the handlebar.

2. Turn off all power to the machine.

3. Loosen the needle bar clamp screw with the 2.5mm hex wrench.

4. Remove the old needle by pulling it down. Discard the old needle in a safe way.

5. With the scarf of the needle (indentation at the back of the needle just above the needle eye) facing the rear of the machine and the long groove down the front of the needle facing the front of the machine, push the needle all the way up into the needle bar until it stops. Check the sight hole to verify that the top of the needle can go up no farther.

6. Check the needle to confirm it is fully inserted. The needle bar has a sight hole above the needle bar clamp screw. Make sure the needle is touching the top of the sight hole. If it is not all the way up, the machine timing will be off and it may be possible for the needle to collide with internal parts, causing damage not covered by warranty.

7. Carefully tighten the needle bar clamp screw.

**CAUTION:** Although you can use your fingers to tighten the needle bar clamp screw, we recommend that after finger-tightening the screw, you use the 2.5mm hex wrench to tighten it just a bit more. The Moxie ST runs at very high speeds and this ensures the needle will not loosen while quilting. However, do not over-tighten the needle clamp screw, as this may strip the threads of the screw. (Stripped threads are not covered under the warranty.) Once the screw no longer turns freely by hand, gently turn the hex tool until the screw is tightened snuggly.

**QUILTING TIP:** A size 16/100 needle will accommodate most threads and fabrics. Heavier threads, such as top stitch and some decorative threads, require a larger needle such as 18/110 or 21/130. Lofty batting and heavier fabrics such as denim, canvas, or densely woven fabric may also require a larger needle.
Hopping Feet

Your machine comes with two hopping feet: a closed-toe foot (comes installed) and an open-toe foot. Use the closed-toe foot for everyday quilting, the Sure Foot for ruler work, and the open-toe foot when you need greater stitch visibility (such as when you are micro quilting).

◊ ONLINE: For more information about changing the hopping feet, watch the video at: https://www.youtube.com/watch?v=lb9MEK7bkLo&t=720s

To change the hopping foot

1. Turn off all power to the machine

2. Raise the needle and foot to their highest position. Remove the foot that is on the mount by using the 2.5mm hex wrench to loosen the mounting screw far enough that you can slide the foot off of the mount.

3. Slide the desired foot onto the mount. Note that the opening on the side of the foot is lined up with the screw. Push the foot up as far as it will go.

4. Fully tighten the screw with the 2.5mm hex wrench.

◆ IMPORTANT: The Moxie ST does not have a presser foot lever, or top tension release, like a home sewing machine. On a home sewing machine the top tension is released when the presser foot is raised, allowing the thread to come freely out of the machine. When a home machine is threaded the tension discs are released and open to allow the thread to easily fall between the tension discs. This isn’t the case with the Moxie ST machine. The top tension is always engaged and the tension discs are never open. Therefore the thread must be pulled up, or flossed, between the tension discs or it will stay outside the discs and float without tension, causing serious stitch quality problems and/or thread nests.
Bobbin and Bobbin Tension

The Moxie ST quilting machine uses M-class bobbins that are much larger than home sewing machine L-class bobbins. The larger bobbins hold more thread and enable you to quilt for a longer time between bobbin changes.

To wind the bobbin

The Moxie ST comes with a separate bobbin winder. For full instructions about using the bobbin winder, see the instruction manual that is packaged with the bobbin winder.

To insert the bobbin into the bobbin case

⚠️ CAUTION: To prevent personal injury, always turn off the power switch while inserting and/or removing the bobbin case or anytime your hands are near the needle area, such as when you change the needle or the hopping foot.

1. Place the bobbin in the bobbin case so the thread is wound clockwise and coming off top right.

2. The thread will then backtrack through the slot.

3. Guide the thread under the bobbin case tension spring.

4. The bobbin should rotate counterclockwise when the thread is pulled when properly threaded under the tension spring.

☞ NOTE: The rule is for the thread to backtrack as it comes off the bobbin under the tension spring. It should rotate the opposite way it is wound. It should not rotate the same direction it is wound. ONLINE: For more information about inserting the bobbin and adjusting bobbin tension, watch the video at: https://www.youtube.com/watch?v=lb9MEK7bkLo&t=493s
To test bobbin tension

The bobbin tension is the foundation for stitch tension. Always set the bobbin tension first.

NOTE: Check the bobbin tension each time a new bobbin is inserted.

1. With the bobbin properly in the bobbin case, hold the bobbin case in the palm of your hand with the open end facing up.

2. Wrap the thread once around the index finger of the opposite hand and attempt to lift the bobbin up by the thread. The bobbin case should stand up on its side, and barely lift out of your hand. If the bobbin will not stand up on its side, the bobbin tension is too loose. If it lifts completely out of your hand and hangs by the thread, the bobbin tension is too tight.

To adjust the bobbin tension

- Make the adjustment using the screw in the center of the tension spring (the larger of the 2 screws). Turn clockwise to tighten and counterclockwise to loosen the tension. Make tiny adjustments to the screw and test again.

To insert the bobbin case into the machine

1. Move the needle to the up position. Turn off the power to the machine.

2. Place the bobbin in the bobbin case.

3. Leave 5 to 6 inches of thread hanging loose. See page 24 for more details.

4. To fit the bobbin case onto the hook spindle in the machine, orient the bobbin case as shown in the photo with alignment tab into the notch to the right. Push the bobbin case inward until it clicks into place.

NOTE: Do not insert the bobbin case into the machine by lifting the release lever on bobbin case. Use the lever only for removing the bobbin case.
Quilting with the Moxie ST

Preparing to Quilt

⚠ IMPORTANT: Make sure your machine has been cleaned, oiled, has a new needle, and that your table top is free from threads or other debris.

1. If the machine isn’t already plugged in, plug it in now.

2. Select your thread and wind one or more bobbins.

3. Set your bobbin tension and thread your machine.

4. Turn on the main power switch at the back of the machine.

5. Use a scrap sample of your quilting material, batting, and backing to test your top tension. Make adjustments to the top tension as needed.

To bring bobbin thread to the top of the quilt

1. After threading the machine, plug it in and turn on the power. Place quilt sandwich under hopping foot.

2. While firmly holding the tail of the needle thread with the left hand, choose one of the following methods to cycle the needle through one full rotation to bring the bobbin thread to the top of the quilt.

   A. Foot Pedal Method. LIGHTLY tap the foot pedal to make the needle go down. Then LIGHTLY tap again to bring the needle up.

   B. Needle Up/Down Button Half-Stitch. Find the Needle Up/Down Button on the right side of the color touchscreen main display. Press once to cycle the needle down. Press again to cycle the needle back up.

   C. Needle Up/Down Button, Full-Stitch. Find the Needle Up/Down Button on the right of the color touchscreen main display. Press and hold briefly to cycle the needle through one complete stitch cycle (down and back up).

3. Pull the fabric 3-4 inches away while holding the needle thread.

4. The bobbin thread will pull up and through to the top, allowing you to grasp the loop and pull it to the desired length.
**To start or stop quilting**

- Much like a domestic sewing machine, you may use the foot pedal to control the speed of the machine as it stitches. The further the pedal is pressed, the faster the machine will make stitches.

- The Start/Stop button at the top right of the screen may be used to start and stop the machine instead of the foot pedal. When the Start/Stop button is pressed, the machine will start, even if the foot pedal is not pressed, and the symbol on the button will change from the play arrow to a double line pause icon. The button color will also change to green. When the button is pressed again, the machine will stop and the pause icon with a blue background color will turn into the play icon with a green background.

- When the machine foot controller is pressed, the button color and icon show that the machine is running by changing the button to the pause icon and blue background. When the foot pedal is released, this button will return to the green button with the play icon.

Threading the Machine

Use the visual guide on the following page as well as the instructions below to thread your machine. Handi Quilter recommends that you select and use only high-quality threads for your quilts.

To thread the machine

1. Place thread cone onto spool pin (1) at the top of the machine; insert the thread through the thread-mast eyelet (2) from back to front, continuing to the three hole thread guide (3).

2. On the three hole thread guide, thread all three holes from back to front, wrapping as you go, being careful not to cross threads. Threading all 3 holes is recommended for most threads. However, some very delicate threads, like metallic or monofilament, may require less tension. If you are having problems with thread breaking, try threading only one or two holes of three-hole thread guide.

3. Continue through the thread guide just above the top tension assembly (4).

4. The thread continues down to the top tension assembly (5).

**IMPORTANT:** The thread must be flossed up between the two tension discs. If the thread is not firmly in place between the two tension discs, the thread will lay on top of the tension discs (no tension) and thread looping on the bottom of the quilt can occur.

5. After the thread is in place between the tension discs, be sure that the thread catches on the take-up spring (6). Then guide the thread under the stirrup thread guide (7). Bring the thread up and through the hole of the take-up lever (8) from back to front, and then through the lower thread guide (9).

**NOTE:** Before threading the needle, test that the machine is threaded properly and the tension is correct by carefully pulling the top thread. It should pull smoothly with light to medium tension. If thread pulls freely with no tension, re-thread the machine, ensuring that the thread is flossed all the way between (pulled up into) the tension discs. Thread through the needle bar thread guide hole (10), this time from front to back. Almost there!

6. Make sure the thread follows the groove down the front of the needle and insert the thread through the eye of the needle from front to back (11). While pulling thread through the eye of the needle, be careful that the thread does not twist around the needle.

**ONLINE:** For more information about threading the machine, watch the video at: https://www.youtube.com/watch?v=lb9MEK7bkLo&t=377s

Top Tension

One of the joys of quilting with the Moxie ST is its ability to utilize many different types of thread. You can quilt with almost any high-quality thread as long as you first adjust the bobbin tension and then adjust the top tension to suit the thread you’ve chosen.

Puckering, gathers, and thread breakage occur when the top thread tension is too tight. Loops and thread nests occur when the top thread tension is too loose. Tension may need to be adjusted depending on the fabric, thread, or batting you are using for your project.

➤ NOTE: Top tension should be adjusted after the bobbin case tension adjustment is made.

➤ NOTE: Dark threads will be thicker (because of more dye) than light threads of the same weight and may require a tension adjustment. The type or brand of thread may also affect tension settings. Each time you change threads, you should check your tension.

➤ IMPORTANT: Before adjusting your top tension, remember to floss the top thread UP between the tension discs or it will float outside the discs providing little or no top tension. This could cause significant stitch quality or thread nesting problems.

❖ QUILTING TIP: Test the tension settings before quilting. The best way to make sure the top and bobbin tension settings are balanced is by quilting a test sample. Keep small pieces of light solid fabric on hand to place at the side of the quilt on the extra batting and backing. Then quilt some small loops and swirls and look at the stitches on top and underneath to ensure the tension looks balanced. Fine tune the tension as needed.

To adjust the top tension

1. Test stitching with a scrap of fabric placed on the extra batting and backing at the side of the quilt. Examine the stitches both on the top and on the underside of the quilt.

2. Adjust the tension by turning the tension dial clockwise to tighten and counter-clockwise to loosen.

3. Continue to test the stitching on the fabric scrap and adjust by turning the tension dial until you are happy with the stitches.
Threading the Needle with the Needle Threader

1. Turn off the power to the machine.
2. Hold the needle threader by the grip, with the triangle mark facing up.
3. Guide the thread, inserting it into the Y groove from right to left horizontally.
4. Place the V groove around the needle, above the eye.
5. Slide the automatic threader down the needle, while pushing it gently against the needle, until the threader pin goes into the needle eye.
6. Push the grip gently. You should see the threader pin and thread loop at the back of Remove the threader from the needle slowly, then pick up the loop with the hook on the threader, pulling the end of the thread out to the back.
7. Turn machine power back on.

To bring bobbin thread to the top of the quilt

1. After the machine is threaded, move the machine over the quilt to your starting location.
2. While firmly holding the tail of the needle thread, press the needle up/down key (button) twice, causing the needle to go down through the quilt sandwich and then back to the up position.
3. Move the machine two to three inches while holding the needle thread in place. The bobbin thread will pull through to the top of the quilt.
4. Grasp the bobbin thread and pull it to the desired length. Reposition the needle to the starting location. Tie off the threads by quilting a few very tiny stitches while holding both the top and bobbin thread. Press the Start/Stop key (button) to begin quilting.

To start or stop quilting

- Start or stop the machine at any time by pressing the Start/Stop key on the handlebars.
- To start quilting press the Start/Stop key. Do not hold the key down.
- To stop quilting press the same Start/Stop key.
**Tension Quick Start Guide**

1. Always adjust bobbin tension first. Bobbin adjustments are minute. Turn the screw in small increments like single minutes on the clock.

2. Stitch to check top tension. To adjust the top tension, turn the knob in quarter turns or 15 minute increments.

3. If thread looks like Diagram A
   Problem: The top thread is too tight.
   Solution: Turn the top tension dial counter-clockwise to loosen the top tension.

4. If thread looks like Diagram B
   Problem: The top thread is too loose.
   Solution: Turn the top tension dial clockwise to tighten the top tension.
Moxie ST Screen Navigation

Complete detailed information for navigation and operation can be found on the following pages.

**Home Screen**

The home screen is the main stitching screen that looks like this or something similar to this. The machine's touchscreen will need to be showing the Home Screen when you are stitching.

For more information about sewing with the different stitch modes, see the Stitch Modes section on p. 44.
Main Menu - Toolbar Options

This the main menu that you will use to go to the machine settings that are listed. When you click on one of the icons, you will be sent to that icon's sub-menu. Press the Home button to go back to the stitching screen.

Lights

When you click on the Lights icon on the main menu, you will be taken to this screen. This will allow you to adjust the brightness of the light under the nose of the machine.

Press the Plus icon (+) to increase the brightness of the light. Press the Minus icon (−) to decrease the brightness of the light. The level of brightness is indicated by the yellow fill lines in the progress bar.

Press the Menu symbol to go back to the Main Menu.
Stitch Counter

When you click on the Stitching icon on the main menu, you will be taken to this screen. This screen will tell you the stitch count of a project and the lifetime stitch count of the machine.

Press the C icon next to the project stitch count to reset the count back to zero. The lifetime stitches cannot be reset.

Press the Menu symbol to go back to the Main Menu.

Overspeed Alarm

Your machine has an alarm that will alert you when you are moving the machine faster than the stitch regulation encoders can track. This may result in uneven quilting. The remedy is to slow down your movement, which the alarm will alert you to.

To turn the alarm ON, make sure you select the alarm clock icon on the right that does not have a line going through it. To turn the alarm off, select the icon on the left that has the line going through it.

When the alarm is OFF, the alarm will not sound, regardless of how fast you move the machine.
Press the Menu symbol ☰ to go back to the Main Menu.

**Information**

The Information screen displays the Machine, LED Control Board, Motor, Display, and Optical Sensor hardware and firmware versions. To check the current and versions of the quilting machine and the display or touchscreen, go to this screen by touching the Information icon.

The hardware version is listed first followed by the firmware version is shown. The Machine information is on top.

Press the Menu symbol ☰ to go back to the Main Menu.

**Diagnostics**

You may be asked to perform diagnostic tests by Handi Quilter’s Technical Solutions team or an authorized HQ retailer.

There are three different items you can run diagnostic testing on: motor, foot pedal, and optical sensors.
Motor

Select this icon to start the test for the motor functionality.

While rotating the handwheel the numbers in the top fill screen will toggle from 0 to 359 degrees indicating where the main shaft is located in its rotation. (Main shaft encoder)

![Diagram of Motor Test](image)

Zero indicates needle up position (take-up lever in its highest position).

The lower fill screen should have numbers changing indicating the motor is turning and communicating. (Motor encoder). If this fails the machine will have a critical error and will not run.

Press the Menu symbol 📅 to go back to the Main Menu.
Foot Pedal

Select this icon to test the foot pedal. Press the foot pedal down and the number should go up from zero to 100 and back down as it is released.

Pass: The number will increase as the pedal is pressed down and decrease as the pedal is released.

**Note:** if the number area has three lines in it, no foot pedal is attached.

Press the Menu symbol to go back to the Main Menu.
Optical Sensors

Select this icon to test the Image Quality functionality of the two optical sensors.

Pass: The Image Quality (IQ) bars will change when the fabric is moved left to right.

Pass: The Image Quality (IQ bars) will change in the number area when the fabric is moved front to back.

The more the bar moves the stronger the Image Quality

Press the Menu symbol ☊ to go back to the Main Menu.
Updates

From time to time, it may be necessary to perform updates to your quilting machine’s software. When the update screen is open, this is what you will see:

Through this screen, you can update the display and machine software to be updated by using a USB drive (with the updated firmware versions) inserted into the USB port at the bottom of the touchscreen.

**NOTE:** When you need to update both the Machine or Motor and Display software at the same time, **ALWAYS COMPLETE THE DISPLAY UPDATE FIRST.** Then proceed with the Machine update.
To complete an update, follow these steps:

1. Download the update(s) and save to a USB drive.

   For the latest software update, visit [https://handiquilter.com/machine-software-updates](https://handiquilter.com/machine-software-updates) and select the Moxie ST tab.

2. Insert the USB drive into the USB port on the bottom of the touchscreen on the Moxie ST.

   **NOTE:** This USB port is used for both the Machine and Display updates.

   **NOTE:** When you need to update both the Machine or Motor and Display software at the same time, **ALWAYS COMPLETE THE DISPLAY UPDATE FIRST.** Then proceed with the Machine update.

3. Press the Machine icon, the Display icon, the Motor icon, or the Optical Sensors icon to begin the update.

   You will see a progress bar like the one below while the **MACHINE** update is being completed.

After an update is complete, the display will go dark briefly and reboot to the Home screen.

If you see either of these icons, there is a problem with either the USB drive or the update file.
You will see a progress bar like the one below while the **DISPLAY** update is being completed.

After an update is complete, the display will go dark briefly and reboot to the Home screen.

If you see any of these icons, there is a problem with either the USB drive or the update file.
Stitch Modes

On the home screen, you can view the different Stitch Modes that you are able to access. Each Stitch Mode varies the look of the home screen and has slightly different functions.

**IMPORTANT**: The Stitch Mode settings cannot be adjusted while the machine is stitching. Ensure the machine has been paused and make your desired changes. Then you may continue stitching.

**Manual Mode**

When using manual stitching mode, the length of the stitch is determined by how quickly or slowly you move the quilt thru the needle of the machine, in combination with the number of stitches per minute (up to 1800) that you choose. You can save two SPM settings.
For a consistent stitch length, move the fabric at a consistent speed. Experiment with different combinations of quilting speed and stitches-per-minute to find what the optimal conditions are for you.

Select the Manual icon and then specify the stitches per minute (speed) by pressing the Plus or Minus key on the screen.

**Precision Mode**

Stitch regulation maintains a consistent stitch length (stitches-per-inch) regardless of how quickly or slowly you move the fabric through the needle of the machine. When quilting in Precision mode, the needle only moves when you move the fabric.

After you press the Start/Stop key or press on the foot pedal move the quilt to begin quilting according to the stitches-per-inch setting.

When you pause moving the quilt, the needle will pause until you move again.

Press the Start/Stop key on the machine to fully stop quilting.

Select the Precision icon and then specify the stitches per inch by pressing the Plus or Minus key on the screen.
Cruise Mode

When quilting in Cruise mode, the needle will start to move immediately when you press the Start/Stop key on the machine or press down on the foot pedal, according to the cruise speed (stitches-per-minute) setting.

Once you hit the start button or press the foot pedal, the needle will immediately start stitching according to the stitches-per-inch (SPI) setting (even if you do not move the quilt). The needle continues to move at the Cruise speed (stitches-per-minute) anytime you pause moving the quilt, until you press the Start/Stop key on the handlebar or release the foot pedal to fully stop quilting.

Select Cruise Mode by touching the Cruise icon on the Home screen.

Note: The Cruise speed is the minimum SPM the machine will stitch, regardless of how the quilt is moved.
Alerts

Alert screens display an icon that indicates an issue with the operation of the machine. The Alert might indicate a minor problem you can remedy on your own, like a loose cable. Other times you may need to seek help from your local retailer or Handi Quilter's Technical Solutions team.

An icon will be displayed on the screen along with a code number that appears in the upper right corner of the screen. This number will help a certified technician or Handi Quilter's Technical Solutions team diagnose the issue. The number will not mean anything to you, but make note of it so you can relay it to your technician.

The icons that can be displayed are shown as follows:

Over/under voltage: This icon appears when the machine has detected a voltage that is out of range for an extended period of time.

Power cycle the machine by turning the machine off at the power switch, wait 10 seconds, and then turn back on. If the trouble repeats, please contact your retailer for service.

Over-current: This icon may appear when the machine has hit an obstruction or is unable to sew through the fabric.

Check your quilt for any obstruction, such as a pin, and remove it. Check that the hand wheel can rotate freely then clear the screen by pressing any key. If the trouble repeats, please contact your retailer.

Obstruction: This icon indicates there may be thread or lint trapped in the bobbin race.

Check for thread or lint in the bobbin race. You may need to have someone turn the hand wheel while you watch the bobbin race. Remove the obstruction and oil the hook. Check that the hand wheel can rotate freely. Clear the screen by pressing any key.
Over-temperature: The over-temperature icon appears if:

- the machine is being stressed by an obstruction
- the machine is stitching through extremely difficult fabric to sew, or
- the machine is operating in a hot environment.

Power off the machine and allow it to cool down. If the problem persists, contact your retailer.

Magnetic Encoder: This icon indicates a problem with the main shaft position sensor.

Please contact your retailer for service.

Service: This icon indicates that the machine should be serviced.

Please contact your retailer for service.
Machine Maintenance

Clean and Oil Your Moxie ST

The only place where you need to regularly oil your machine is the bobbin hook assembly. Failure to keep the hook assembly lubricated can cause severe damage to the machine.

We recommend that you oil the hook assembly with each bobbin change and before use if you haven’t used the machine for a few days. A change in the sound of the machine while quilting also indicates that it may need to be oiled.

↑ **NOTE**: Internal lubrication will be done when the machine is taken to a service technician for routine maintenance and cleaning, every 24 months or 10 million stitches (whichever comes first).

✿ **IMPORTANT**: Only use light sewing machine oil on the hook when oiling your machine.

To clean the bobbin area and oil the bobbin hook

ghan ONLINE: To see how to clean and oil the bobbin area, watch the video at: https://www.youtube.com/watch?v=lb9MEK7bkLo&t=2920s

1. Turn off the machine. Remove the bobbin and bobbin case.

2. Clean the bobbin basket area using a lint brush (provided) or a quick blast of canned air.

3. Put a small drop of oil on the hook in the region where the bobbin basket assembly and the rotating hook meet. The oil will work its way back into the interlocking area of the hook and bobbin basket.

4. Replace the bobbin case with bobbin and turn on the machine.

✿ **QUILTING TIP**: After oiling, always sew a few seconds on a scrap piece of fabric off the side of the quilt as oil may cling to thread. Over-oiling can cause excess dripping from the bobbin assembly.

To clean the Moxie display

- Use a soft rag or microfiber cloth (dampened with diluted isopropyl alcohol if needed) and gently wipe the display to remove any dust or finger marks.

△ **CAUTION**: Never use any chemicals to clean your display as this may negatively affect the display’s performance.
Maintenance Schedule

In addition to the ongoing cleaning and oiling maintenance that you do on a regular basis when you quilt, you should have your machine serviced by an authorized Handi Quilter technician every 24 months or 10 million stitches, whichever occurs first. They will take care of oiling and greasing internal parts and ensure the machine is in optimal working order.
Troubleshooting

You can correct many problems on your own. If you need additional help, contact your local, authorized Handi Quilter retailer who supports you and your machine. You can also contact Handi Quilter technical solutions at 1-801-292-7988, 1-877-MY-QUILT (697-8458), or TechCares@HandiQuilter.com.

First, check the following:

1. The AC power cord is properly connected (at both ends) and the power switch is turned on.
2. Confirm that all cables are properly seated into their connections.
3. Turn off the machine completely. Wait for at least ten seconds and then turn it back on.

If the above checks do not solve the problem, refer to the information below.

| | • Always change the needle if it has been hit, bumped or pulled off center while maneuvering the machine over the quilt. A slightly bent needle can be a major cause of skipped stitches. |
| Incorrect needle size | • Use the proper size needle for the job. Start with matching the needle size with the thread; consult the chart on your Moxie ST Quick Reference Card. Some battings and fabrics used in quilting may require a larger size needle.

<td>Thread is entangled and caught in the hook</td>
<td>• There may be a thread lock. Quickly rock the hand wheel, at the back of the machine, back and forth several times. You may need another person to turn the hand wheel while you look for the thread that is caught. Once thread lock is cleared re-oil the hook and make sure the hand wheel turns freely.</td>

<tr>
<td>There is a thread lock.</td>
<td>• Carefully rock the hand wheel in direction of motion and then the other direction until the thread lock breaks free. Once the hand wheel can be turned freely, remove the thread from the hook and basket. Now re-oil the hook and make sure the hand wheel turns freely without the hook hitting the needle. It is possible for a thread lock to cause a timing problem or a bent needle.</td>

| Poor Quality Thread, may have severe twisting or thread rot. | • Look for severe twisting of threads when approximately 12 to 15 inches has been pulled off, with the ends pinched together.  
  • Cotton threads are particularly susceptible to dry rot or wet rot which makes thread brittle.  
  • Do not use poor quality thread, or thread that is rotted or brittle. |
<p>| Top and bobbin tensions not balanced     | • Balance the tension of the needle thread after ensuring the bobbin tension is adjusted correctly. (For more information about adjusting tension, see Bobbin and Bobbin Tension in the Using Your Machine section of this manual.) |</p>

| The machine has been threaded incorrectly or thread spools are not positioned correctly | • Check that the machine is threaded correctly. Refer to diagram on Quick Reference Card.  
• Check for accidental double wrapping of thread on thread guides.  
• Check the thread mast, making sure the eyelet of the mast is directly over the cone.  
• Check the position of the thread cone. Tipped cones can dramatically affect thread tension and can cause breakage. |
<p>| Debris in tension discs                                               | • Inspect for particles and remove any fuzz or debris.                  |
| Bobbin rotation is not smooth                                         | • Change the bobbin. The slightest hesitation of the bobbin rotation can be the cause of dramatic tension change and thread breakage. |
| Needle is burred, bent or dull, or installed incorrectly              | • Change the needle at least once per quilt. Make sure the needle is installed to the top of the sight hole in the needle bar. |
| Needle not suitable for thread                                        | • Replace the needle to one better suited for the thread. Use the proper size needle. Refer to chart in Machine Needle section. |
| Hesitating too long at one point in quilting motif                    | • Move more quickly so stitches don’t overlap or build up. When starting the machine, begin moving immediately. Sewing in one place too long will cause the thread to break. |
| Improper needle/hook relationship                                     | • Machine timing needs to be checked. Consult an authorized Handi Quilter technician. |
| Damage or burr at needle hole of throat plate or other thread handling part | • If thread is shredding at the throat plate, check for burrs or jagged edges. Gently rub with emery cloth to remove the sharp edge. Consult a repair technician to polish any hard-to-reach or delicate areas. |</p>

<tr>
<th>Wrong type of needle</th>
<th>• Use only the needles recommended by Handi Quilter (needle system 134, sizes 12 through 21).</th>
</tr>
</thead>
</table>
| Other possible problems | • Needle too close to hook, causing friction and possible collision of hook point and needle (causing broken thread).  
• Needle plate damage  
• Hook damage  
• Broken needles or damaged needle bar clamp |

**NOTE:** If the troubleshooting tips do not eliminate the problem, please consult an authorized HQ retailer.

Federal Communications Commissions (FCC) Declaration of Conformity
(For USA Only)

Responsible Party: Handi Quilter, Inc.
501 North 400 West
North Salt Lake, UT 84054

declares that the product,
Product Name: Moxie ST
complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Consult the dealer or an experienced radio/TV technician for help.

Changes or modifications not expressly approved by the manufacturer or local sales distributor could void the user’s authority to operate the equipment.

Canadian Department of Communications Compliance Statement (For Canada Only)

This digital apparatus does not exceed the Class B limits for radio noise emission from digital apparatus as set out in the interference-causing equipment standard entitled “Digital Apparatus”, ICES-003 of the Department of Communications.

Radio Interference (Other than USA and Canada)

This machine complies with EN55022 (CISPR Publication 22) /Class B and AUS/NZ 55022/Class B.
Warranty issues should, whenever possible, first be submitted to the Authorized Retailer who completed your service and training. These Retailers have been selected for their dedication to customer satisfaction and have been trained in technical service. They also may provide follow-up advice, training, service, accessories, and other services.

HQ Authorized Retailers may offer their own warranties in addition to those offered by the manufacturer, but do not obligate the manufacturer.

**HQ Quilting Machine Limited Warranty**

Handi Quilter, Inc. (hereinafter HQ) offers a limited warranty on the HQ Quilting Machine (hereinafter “Machine”) to be free of defects in workmanship and materials under normal use upon the terms and conditions hereinafter set forth:

(a) 90 day Limited Warranty: During the first 90 days from date of purchase, HQ will repair any manufacturing defect without charge for parts or labor. All subsequent warranties include parts costs only.

(b) 5-year Mechanical Warranty: For any mechanical failure within this period. Manufacturer will provide free replacement parts, customer pays for labor and shipping.

(c) 5-year Electronic/Electrical Warranty: The electric/electronic components are warranted to be free from manufacturing defects for five years from the date of purchase. If any defect is reported within this period, manufacturer will provide free replacement parts, customer pays for labor and shipping.

(d) 10-year Limited Manufacturer’s Warranty: HQ warrants the sewing head is free of casting or machining imperfections causing product failure. This warranty does not extend to mechanical or electronic/electrical parts, which are covered under a separate warranty, or consequential damage to the head caused by mechanical or electronic/electrical part failures beyond their warranty period.

The limited warranty stated in sections (b), (c) and (d) above shall be limited solely to the replacement of parts which, in the opinion of HQ, are defective in workmanship or material and are returned to HQ, or an authorized repair facility, or such other point or place that may be designated by HQ. All other costs, including cost of freight and shipment for repair under this warranty, shall be the customer’s costs.

The machine registration card must be completed and received by HQ before warranty is valid.

Warranty Exclusions: HQ shall have no obligation for any claim under this warranty if the machine has
been misused, abused, neglected, damaged in transit or has been altered from the standard specifications established by HQ, or if proper maintenance and lubrication have not been timely performed.

No warranties extend beyond the express warranty offered. HQ disclaims all other warranties, express or implied, regarding the Products, including any implied warranties of merchantability or fitness for a particular purpose. In the United States, some laws do not allow the exclusion of the implied warranties.

Specific exclusions of warranty limitations include, but are not limited to, the following:

- General, consequential, incidental or special damages including damage to fabric or material, the cost of rework or lost profits, the cost of installation or removal of any Products, and any inspection, testing, or redesign caused by any defect or by the repair or replacement of Products arising from a defect in any Product.

- Products which are received by HQ improperly packaged, altered, or physically damaged.

- Counterfeit or altered label(s) or stickers.

- Broken pins on connectors.

- Stripped screws or nuts.

- Connector(s) damaged, cracked, missing or broken.

- Missing, torn or punctured seal(s).

- Any use besides machine quilting applications using customary fabrics, threads and accessories.

- Operator error in the customary use of the Product.

- Internal adjustments, tampering or parts replacement done by anyone except authorized Retailers or customers specifically authorized by Handi Quilter Customer Support or warranty repair personnel on a case by case basis.

The warranty does not cover and the user assumes the risk of and there is hereby excluded any liability to HQ for failure, defects, loss, deterioration, personal injury or damage which are due to: (1) ordinary wear and tear or exposure, (2) abuse, misuse, negligence, or (3) use of parts not authorized by HQ.

In no event shall HQ be liable to the purchaser of the Machine or to third parties for special or consequential damages, including, but not limited to, death or personal injuries.

HQ does not assume, or authorize any person to assume on its behalf, any other obligation of liability other than that set forth herein.
Some states do not allow exclusion of limitation of incidental or consequential damages, so above limitation or exclusion may not apply. This warranty gives the purchaser specific legal rights and the purchaser may also have other rights, which may vary for State to State.

Exclusive Remedy: Remedy is limited to the repair or replacement of the defective Product. HQ may elect which remedy or combination of remedies to provide at its sole discretion and shall have a reasonable time, after determining that a defective Product exists, to repair or replace the defective product. Replacement Product may be from new or serviceable used parts. HQ’s warranty applies to repaired or replaced Products for the balance of the applicable period of the original warranty or ninety days from the date of shipment of a repaired or replaced Product, whichever is longer.

HQ's entire liability for any defective Product shall in no event exceed the purchase price for the defective Product. This limitation applies even if Handi Quilter cannot or does not repair or replace any defective Product.

Service under the above warranties may be obtained by returning the quilting machine, with proof of purchase, to the authorized Retailer from whom the machine was purchased, a local Retailer, or to Handi Quilter Customer Support.

Any product to be returned to the factory, either by customers or Retailers, must be accompanied by a Return Material Authorization Number (RMA). RMAs may be obtained by email (sales@HandiQuilter.com) or by calling customer support toll free at 1-877-697-8458. If it is determined that the Product may be defective, an RMA number will be issued with instructions for Product return. An unauthorized return (a return without an RMA number) will be shipped back to customer at customer’s expense. Authorized returns are to be shipped prepaid and insured in an approved shipping container. The original box and packaging materials should be kept for storing or shipping.

Shipping Costs: Shipping is the responsibility of the customer.

Product Service and Maintenance: Replace needles every 2 to 4 hours (1 to 2 per large quilt) and lubricate bobbin hook every 3 to 4 hours of use. Periodically check the thread tensioner. Use a small brush to clean out all lint, loose thread or obstructions from the bobbin hook.

Servicing is recommended annually from a qualified Retailer. Servicing will cover belt tensioning, encoder positioning, bearing retainers, hook axial play and timing, presser and needle-bar adjustment and internal lubrication to take-up lever, hopping foot levers, bushings/bearings.
